UNIVERSIDAD AUTÓNOMA DE BAJA CALIFORNIA
Facultad de Ingeniería, Arquitectura y Diseño

Ingeniero en Software y Tecnologías Emergentes

Nombre Alumno:
Eliel Alfonso Ontiveros Ojeda

Grupo:
932

Practica #3

06/09/2023

Procedimiento

Ejercicio 1

```python
import scipy.stats as stats
import math

std_deviation = 0.0015
sample_size = 75
sample_mean = 0.310
confidence_level = 0.95

standard_error_mean = std_deviation / math.sqrt(sample_size)

degrees_of_freedom = sample_size - 1
critical_value = stats.t.ppf((1 + confidence_level) / 2, df=degrees_of_freedom)

confidence_interval = (
    sample_mean - critical_value * standard_error_mean,
    sample_mean + critical_value * standard_error_mean
)

print(f"{confidence_level * 100}% confidence interval for the mean depth:")
print(f"({confidence_interval[0]:.5f}, {confidence_interval[1]:.5f}) inches")
```

```
In [3]: runfile('C:/Users/Eliel/OneDrive/Documentos/Universidad/
Estadística Avanzada/Unidad 1/Practica_3.py', wdir='C:/Users/
Eliel/OneDrive/Documentos/Universidad/Estadística Avanzada/Unidad
1')
95.0% confidence interval for the mean depth:
(0.30965, 0.31035) inches
```

Ejercicio 2

```python
import scipy.stats as stats
import math

std_deviation = 0.0015
sample_size = 75
sample_mean = 0.310
confidence_level = 0.95

standard_error_mean = std_deviation / math.sqrt(sample_size)

degrees_of_freedom = sample_size - 1
critical_value = stats.t.ppf((1 + confidence_level) / 2, df=degrees_of_freedom)

confidence_interval = (
    sample_mean - critical_value * standard_error_mean,
    sample_mean + critical_value * standard_error_mean
)

print(f"{confidence_level * 100}% confidence interval for the mean depth:")
print(f"({confidence_interval[0]:.5f}, {confidence_interval[1]:.5f}) inches")
```

```
In [4]: runfile('C:/Users/Eliel/OneDrive/Documentos/Universidad/
Estadística Avanzada/Unidad 1/Practica_3.2.py', wdir='C:/Users/
Eliel/OneDrive/Documentos/Universidad/Estadística Avanzada/Unidad
1')
95.0% confidence interval for the mean depth:
(0.30965, 0.31035) inches
```

Ejercicio 3

```python
import scipy.stats as stats
import math

population_mean = 3
standard_deviation = 1.6
sample_size = 48
confidence_level = 0.95

standard_error_mean = standard_deviation / math.sqrt(sample_size)

degrees_of_freedom = sample_size - 1
critical_value = stats.t.ppf((1 + confidence_level) / 2, df=degrees_of_freedom)

confidence_interval = (
    population_mean - critical_value * standard_error_mean,
    population_mean + critical_value * standard_error_mean
)

print(f"{confidence_level * 100}% confidence interval for the mean price:")
print(f"(${confidence_interval[0]:.2f}, ${confidence_interval[1]:.2f}) per kilogram")
```

```
In [5]: runfile('C:/Users/Eliel/OneDrive/Documentos/Universidad/
Estadística Avanzada/Unidad 1/Practica_3.3.py', wdir='C:/Users/
Eliel/OneDrive/Documentos/Universidad/Estadística Avanzada/Unidad
1')
95.0% confidence interval for the mean price:
($2.54, $3.46) per kilogram
```
